

## EXTREMADURA TECH\_TALENT

14 de noviembre de 2019. Madrid

<p>[Logo]</p>  <p>METADATØ1</p>	<p><b>Descripción de la empresa:</b></p> <p>Metadatol is a product company born in Cáceres with the spirit of solving the content management issues that occur on Pay TV platforms by providing metadata and targeted solutions, based on AWS.</p>
<p><b>Resumen de 3 proyectos en ejecución</b></p>	<p><b>MediaStream:</b> is an AWS-hosted service for the integrated management of content metadata and linear/ondemand programming info designed to consolidate multiple information sources into a common repository and relay the unified information to as many end-user TV platforms as required. Metadata unification is aided by powerful AI algorithms designed to minimize human supervision. MediaStream handles EPG and VoD (both external and in-house) catalogs: in-house VoD comes with a complete programming section covering commercial as well as licensing information. MediaStream manages textual and image metadata, and, optionally, can interoperate with MediaCode to track and control media asset preparation and delivery.</p> <p><b>MediaCode:</b> is an AWS-hosted workflow manager able to accept raw asset files from content producers and channel them down a full processing chain including encoding to various profiles, subtitle embedding, quality control and watermarking. Output media files (assets) are signaled to MediaStream so that MediaStream's export module can publish them along with associated metadata to operator's end-user TV platforms.</p> <p><b>MediaTag:</b> is an AI-powered assistant for the discovery and grouping of content based on its metadata information. MediaTag uses some powerful algorithms to analyze content metadata and media and extract relevant keywords or tags. These tags are used to retrieve matching content for tag clouds (or themes) created by the operator. Finally, themes can be used to populate play lists of contents (or topics) that can be further refined by the operator and exported to MediaStream or some other external systems for exploitation</p>

<p><b>Perfiles que se demandan (añadir adjunto si se quiere ampliar la información )</b></p>	<p>We are looking for a <b>Technical Leader</b> with project and people management skills.</p> <p>It's a must to demonstrate vocation for teaching and abilities to coordinate a small team.</p> <p><b><u>Technology that the candidate have to know:</u></b></p> <ul style="list-style-type: none"><li>• JavaScript ES6</li><li>• NodeJS</li><li>• AWS</li></ul> <p><b><u>Management tools to use:</u></b></p> <ul style="list-style-type: none"><li>• JIRA</li><li>• Assembla</li><li>• Trello</li></ul> <p>It will be located in Cáceres. Moving to Madrid once or twice each two weeks.</p>
